COMPANY HISTORY

McKuinn Pipeline Inc. was founded in 2003. Its founding premise was to build a high-quality utility construction portfolio through strategic acquisition of contracts in its local marketplace and to expand as we grew.

In 2010, the company decided to pursue a niche opportunity in the Nebraska and Wyoming regions to both expand its contract portfolio and launch a cutting edge construction project to erect GPS poles for Union Pacific Railroad. New offices and construction crews were established at that time to oversee all construction efforts. McKuinn Pipeline Inc. is now a full-service general contractor specializing in commercial industrial projects. Corporate offices are located in Hollister, California.

How are we different?

First, we do not receive any monetary compensation for our services until a project is complete and all work has been inspected.

Second, we invest our own cash into each project. This allows the contracting company to diversify their investment dollars into other projects. This also eliminates many of the common Client-Contractor conflicts regarding payment, performance, and/or warranty disputes.

Third, due to the fact that we don't make a profit until the project is profitable, we are encouraged to meet and beat project budgets and schedules or face the consequence of working for free, or worse, losing our own hard-earned capital.

EXPERIENCE

William “Bill” McKuin

Over 35 Years Experience

Hwy 9 - Santa Cruz Mountains

McKuin Pipeline, Inc. successfully completed a seven mile trenching job for AT&T over the summer of 2010. The job consisted of trenching and boring to place one 4" conduit and run fiber optics within three inner ducts inside the conduit. This job spanned from Boulder Creek to San Jose, CA along Highway 9 in the Santa Cruz Mountains. The map above shows the path of Highway 9 and the following photos are of the project itself.

OUR SERVICES

-Aerial Installation and Maintenance (including tree line)

-Bore

-Manholes

-Conduit

-Trench & Plow
